

PROFILE SUMMARY

MCA student (VESIT) targeting an Associate Software Engineer role at Saint-Gobain INDEC, with a track record of turning technical concepts into shipped solutions: built and pitched SAVAR, an IoT crash-detection system, to win two national-level startup competitions. Combines Java full-stack development, structured problem-solving, and database fundamentals with stakeholder communication as an active student leader – wired to understand technical requirements, communicate solutions clearly, and drive successful implementation.

EDUCATION

Vivekanand Education Society's Institute of Technology (VESIT). <i>Master of Computer Applications (MCA) — SGPA: 9.54, 9.88</i>	2025 – 2027
Tuljaram Chaturchand College, Baramati. <i>Bachelor of Computer Applications (BCA) – CGPA: 9.86, Top 10% of class</i>	2022 – 2025
Presented research papers on Prompt Engineering and Emerging Fin-tech in India	

LEADERSHIP & ACHIEVEMENTS

Placement Coordinator, MCA Department. <i>Vivekanand Education Society's Institute of Technology</i>	2025 – Present
Liaise between the placement cell, recruiters, and students – coordinating drives and scheduling for the MCA batch; a stakeholder-management skill directly transferable to cross-functional delivery and requirement-gathering.	
SAVAR – National Startup Pitch Recognition. <i>Startup Pitch Competitions</i>	2025
1st Prize – All India MCA Meet, NIT Tiruchirappalli 3rd Prize – E-Summit, BVCOEL Pune	

PROJECTS

SAVAR – IoT-Based Two-Wheeler Crash Detection System.	Jan 2025 – Present
- Owned the solution end-to-end: identified the safety gap, scoped requirements, and built a working prototype (ESP32, MPU-6050 motion sensing, MAX30102 heart-rate monitoring, BLE architecture). - Iterated the concept from a pitch competition (team Bikesafe, VESIT) into an IEEE-format research paper presented at NIT Tiruchirappalli, then into a two-time national pitch-competition winner. Stack: Android (Java, XML), ESP32, MPU-6050, MAX30102, Firebase, BLE.	
Aria – AI Voice Assistant for Medical Reception.	2025
Implemented a voice-based AI receptionist for a live oncology center to handle patient calls end-to-end, reducing manual front-desk load; integrated Twilio, Sarvam AI (Indian-language STT/TTS), Gemini 1.5 Flash, and MongoDB.	
PeerPulse – Note-Sharing Web Platform	Jul 2024
Built a web app for students to create and join “Circles” to share notes and resources, with an AI chat assistant via the Google Gemini API. Stack: HTML, CSS, JS, Bootstrap, Java, Servlets, JSP, JDBC, MySQL.	

EXPERIENCE

Aspire Technologies. <i>Java Full Stack Intern</i>	Jun – Sep 2024
- Partnered directly with design and engineering across multiple feature releases, translating requirements into user flows, wireframes, and clickable prototypes — writing clean, maintainable Java code as part of an agile delivery team. - Communicated progress and blockers proactively across sprint ceremonies, coordinating with senior engineers to align on project objectives.	
Innomatics Research Labs, Pune. <i>Junior Data Scientist Intern</i>	Jun – Jul 2025
Cleaned and analyzed real-world datasets end-to-end using SQL and Python – from exploratory analysis through model building – turning raw data into insights that shaped stakeholder decisions, and iterated on solutions based on mentor feedback.	
Tripathi Classes. <i>Operations & Administration</i>	Jun – Dec 2024
Owned end-to-end operations for a JEE/NEET coaching institute – managing student records, faculty schedules, and budgets – and built tracking spreadsheets that surfaced and drove process improvements.	

TECHNICAL SKILLS

Programming: Java, JavaScript, Python, SQL, HTML/CSS, XML
Databases: MySQL, MongoDB, Firebase — querying, joins, and data retrieval
Frameworks & Tools: Spring Boot, Servlets/JSP, JDBC, Bootstrap, Git/GitHub
Data & Cloud Concepts: Exploratory data analysis, dashboards/spreadsheets, REST APIs, Firebase (cloud), agile delivery
Core CS: Data structures & algorithms, structured problem framing, requirement analysis
Languages: English, Hindi (Proficient), Marathi (Native)
